

BRAVIS

High Secure Video Communication

Digital medical visits

BRAVIS video conference tool guarantees **secure digital medical visits** or **digital group therapy**. BRAVIS does not require any server, just a small communication server to set the connection. The integrated user administration allows to add patients to a conference and also carry out digital consultations with medical specialists. BRAVIS guest version works on the **desktop** as well as with the **smartphone**.

BRAVIS is

- **Provider independent**
- **Peer-to-peer operated**
- **High secure**
- **Intuitive in using**
- **Suitable for diagnostics**
- **Cost-optimizing**

BRAVIS

High Secure Video Communication

Digital consultation

Location-independent diagnosis and advice with the BRAVIS **conference tool** is **time efficient**. Consultations by external specialists are just as possible as patient-doctor discussions.

The data is transmitted according to the **highest security requirements** and limited to a minimum. **CT data, MRI data or biopsy results** can be **transmitted securely** through desktop and application sharing in **high-quality video**.

FEATURES

- High security
- High quality video
- File transfer
- Data and application sharing
- Patients and contact management
- White Label configuration
